

Success

The success of your simple unloading
and automation applications

For IMMs from 20 to 1000 T

Simply Intuitive

Clamp Features

The Axess Robots 7 | 11 | 22 | 33 | 44

Sepro has chosen to use servo-motor technology to simultaneously manage 3 CNC axes as standard.

As standard, we also offer:

A compact arm and rotation unit.

Electric and pneumatic connections, mechanical coupling designed to be quickly changed for different productions runs.

The Y free function makes programming easier for parts ejection tracking and enables you to save on gripper costs thanks to a simpler design.

Innovation & experience

A compact control cabinet mounted on the beam with an innovative, modular layout.

The compact control cabinet is mounted on the robot beam end as standard on Axess 7 and as an option on all other models of the Axess range.

Exclusive elastic unit (option): this mechanical unit protects the gripper and mold during part gripping settings and softens the contact between the gripper and the molded part in the case of small inaccuracies (a few mm) on the ejection movement or the mold opening.

The overall gripper support unit is mounted on a linear axis parallel to the injection axis. A corrector unit applies elastic pressure on this unit and if the sensor detects that too much force is applied, it automatically brings the robot to a halt.

Features/Options

See what you're creating in 3D

With the Simple Pick & Place Module, create your cycle by just answering the questions the system asks you and see the result immediately in 3D on the video.

«What you see is what you get»

Make your daily routine easier

- Fine-tuning movements in the mold made easy thanks to the joystick.
- The large, 10" LCD screen gives you clear and precise information.
- You can consult the full-screen, online documentation at any time.
- If a fault appears, troubleshooting data is displayed automatically.
- Thanks to the USB key, operators, setters, programmers and maintenance personnel have direct access to the relevant data.

Tried and tested ergonomics

Task-based navigation means you can directly access the job to be done:

- Production - Mold Change - Programming - Maintenance.

Eco Mode:

after having programmed your cycle, you just need to press one key to limit power consumption during the cycle.

Joystick

Large, 10" LCD screen

USB key & Ethernet
